

ATOPIIC DERMATITIS:

it is a chronic skin disease which affects 15% of children and 3% of adults

the most comprehensive therapeutic strategy for the treatment of atopic dermatitis

Without fragrances, colorants, alcohol, artificial preservatives, lanolin, silicones, petrolatum, SLE, SLS and parabens.

Dermatologically tested, nickel tested and not tested on animals.

1-MOISTURISES 2-CLEANS 3-RECONSTRUCTS 4-SOOTHES

Atopic Dermatitis predisposes the patient to:

- to have dry and inflamed skin,
- to easily contract skin infections,
- to become allergic to foods and then to environmental allergens,
- to develop itching and causing injury by scratching.

Healthy Skin:

To optimally manage atopic dermatitis it is important to know the structure of the skin. The healthy skin is formed by cells (bricks) and from fat ceramides (mortar) that hold them together. This, as a real wall, separates the body from the external environment. Thus it allows the skin to function as a real barrier which prevents water from exit, which prevents bacteria, fungi and allergens from entering the body.

LEGENDA:

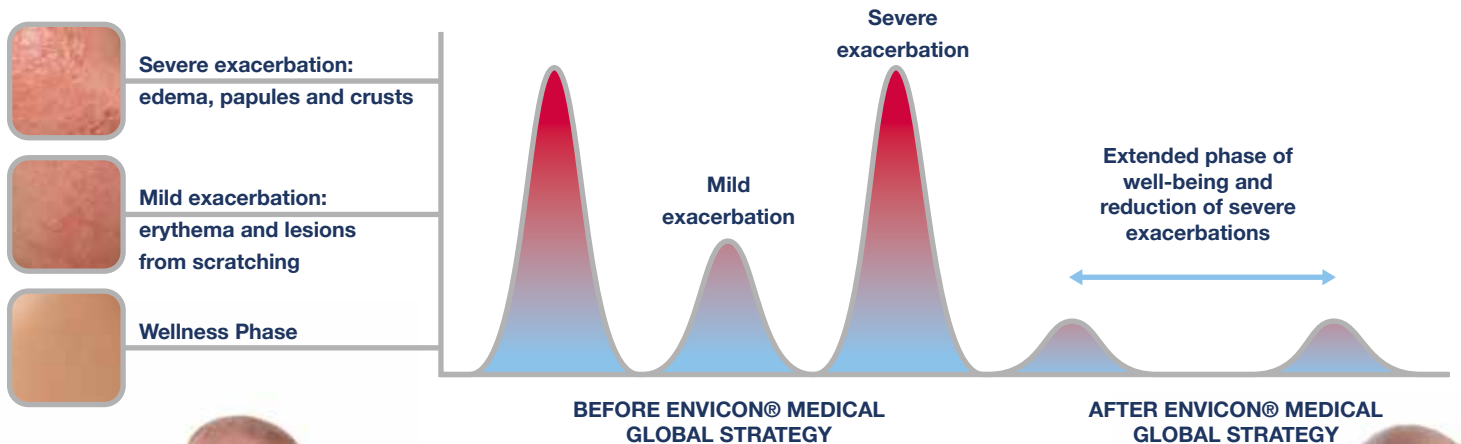

- bacteria, fungi and allergens remain outside,
- the water remains inside the skin.

- bacteria, fungi and allergens enter the body,
- the water comes out of the skin.

Cyclical pattern of Atopic Dermatitis:

Healing can occur spontaneously after a few months or years. Usually the trouble persists for a long time with phases of relative well-being alternated with phases of exacerbation more or less serious that require the use of cortisone drugs, but carefully following a global and daily strategy it is possible to prolong the periods of well-being and to reduce the severity of exacerbations.

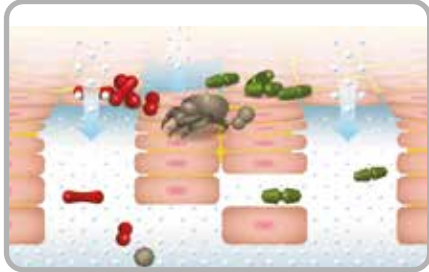

**THERE IS NO CURE FOR A.D.,
BUT YOU CAN FEEL BETTER!**

STRATEGY IN 4 PHASES:

With an optimal therapeutic strategy it is possible:

to keep your skin properly hydrated

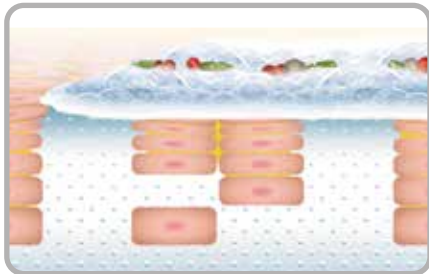

Moisturizing:

Idrocristalli® Envicon: facilitate water penetration into the hydro-lipid film.

Main Active: Magnesium Chloride, Sodium Chloride, Magnesium Sulfate, Urea, Allantoin.

to prevent and combat the onset of skin infections caused by fungi and bacteria,

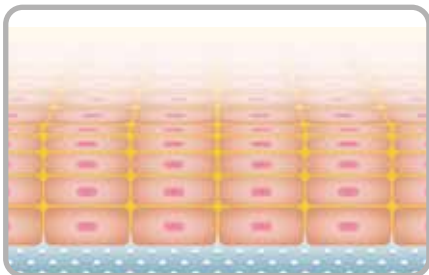

Detergent action:

Envisoap®: reduces the concentration of bacteria and fungi normally present on the skin.

Main Active: : C18 monoglyceride, Antibacterials Natural Pirocton Olamine, Phytosphingosine.

to restore the barrier effect of the skin to prevent the onset of food allergies and due to environmental allergens,

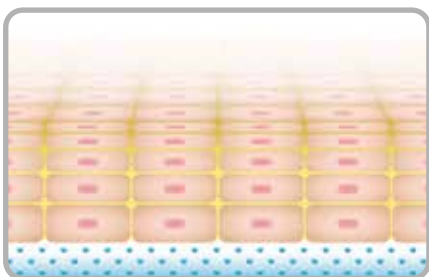

Moisturizing/
reconstructive action:

Envicer3® Greasy or Lean: promote the reconstruction of the hydro-lipid film.

Main Active: Ceramide 3, Essential Lipids, Cholesterol, Hyaluronic Acid, Phytosphingosine, Vitamin E.

to reduce itching and inflammation and consequently the injury from scratching

Dereddening/
soothing action:

Enviplus® Greasy or Lean: reduce skin inflammation.

Main Active: Vitis Vinifera, Glycyrrhetic Acid, Panthenol, Phytosphingosine, Vitamin E.

2-Cleaning action:

Envisoap®:

Envioil®:

Lean creams and greasy creams: when to use them?

The lean creams are used during the winter months, when the skin is drier. During flare-ups, especially if it is the first time you use the Global Strategy Envicon® Medical, it is recommended to use lean creams.

It is normal that the use of greasy creams during an exacerbation promotes inflammation.

3-Reconstructive action:

Envicer3® Lean:

Envicer3® Greasy:

4-Soothing action:

Enviplus® Lean:

Enviplus® Greasy:
